750SD-BSC	Back Seat Cushion (for Super-Duty model only)	1		
750SD-BSB	Back Seat Backrest (for Super-Duty model only)	1		
Optional:				

*Cabin sides: Using cardboard, cut a template that covers the desired area of the cabin-side, between the front of the seat and the firewall. Take into account any cables, wires and/or fuel lines that need to be covered or accommodated by your side panels (note: The left side may differ slightly from the right side). Plan your securing method (type and location of fasteners) as you shape & position your panels; you can use the existing fuselage structure where appropriate.

Use your template to trace and cut-out your L & R side-panels from the provided aluminum panels (P/N 750-CSP). Cover your panel with a layer of foam (P/N 750-CSF); then cover the foam with the vinyl or cloth material (P/N 750-CSM), also provided in the kit. Note: Cut the cloth approx. 1" larger than the foam-covered panel all around, so that you can wrap it over the edge, pull it tight and glue it in place with contact cement.

Insert your finished cabin-side panels into the aircraft and secure them in place. Confirm that they cannot come loose and/or interfere with the operation of the aircraft systems (controls, fuel, electrical, etc.). Customize as desired...
